

Principles

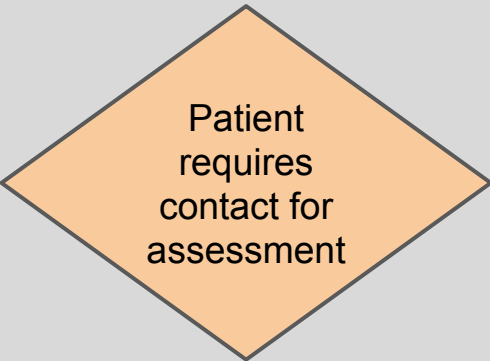

- Consider all alternatives to entering Hot Zone
- Minimize # of responders in Hot Zone
- Maintain a higher threshold for transport than normal
- Reduce equipment in Hot Zone when possible
- Consider ways to reduce PPE use and maintain PPE inventories
- Use Surgical Mask when not in Hot or Warm Zones
 - Non COVID19 patient contacts
 - Ambulance decon

Hot Zone

- Within 6' of patient
- Areas where airborne particles may be likely
- **Use full PPE**

Warm Zone

- Within patient proximity but outside of Hot Zone
- Areas where airborne particles are not likely
- **Use N95 Mask, Gloves**

Based on:

- Information provided by Vail Dispatch
- EIDS Criteria
 - Cough
 - Fever / Chills
 - Sore Throat
 - Shortness of Breath
 - Hx of COVID contact
- Other information as it becomes available:

- Shortness of breath
- Chest pain
- Altered mental status
- Other
- Patient is not capable of efficiently using a phone app to communicate about their condition

- Acute complaint unrelated to COVID19
- Shortness of breath
- Chest pain
- Altered mental status

- Shortness of breath
- Clinical signs of respiratory distress or failure
- Abnormal vital signs
- Chest pain
- Altered mental status
